third edition coming up!

ELOQUENT is a lab for evaluating the quality of generative language models

- LLMs are used as standard tools
 - Strong assumptions about transfer learning and the generality of language
 - Quality tests often variants of training monitor benchmark tests
 - Top level goals of using LLMs in practice not well aligned with what tests test
1. **Voight-Kampff:** identifying machine-generated text (with PAN lab)
 2. **Multilingual Cultural Diversity and Cultural Robustness:** addressing variation and consistency across languages and cultural areas (with OpenEuroLLM and DeployAI projects)
 3. **Sensemaking:** generating, translating, and scoring PISA tests (with OECD)
