

ELOQUENT 2026

3d edition of the lab for evaluation of generative language model quality

Jussi Karlgren

ELOQUENT Tasks

Voight-Kampff

Can your LLM fool a classifier to believe it is human?

(Joint with PAN)

ELOQUENT Tasks

Voight-Kampff

Can your LLM fool a classifier to believe it is human?

(Joint with PAN)

Cultural Robustness and Diversity

Will your machine respond with the same content to all of us?

Objectives

Digital Sovereignty and Farmers' Market Data

Systems should be built on models that are culturally relevant and that are trained on data that are locally sourced, of high quality, and freshly harvested.

How to check for this?

Objectives

Digital Sovereignty and Farmers' Market Data

Systems should be built on models that are culturally relevant and that are trained on data that are locally sourced, of high quality, and freshly harvested.

How to check for this?

Home-grown Quality Assurance

Evaluation test suites and instruction training data sets are created in the English language, a Germanic language spoken in Northern California, and tailored to local concerns there.

How to identify and handle culture-specific and typology-specific concerns?

Objectives

Digital Sovereignty and Farmers' Market Data

Systems should be built on models that are culturally relevant and that are trained on data that are locally sourced, of high quality, and freshly harvested.

How to check for this?

Validated Testing of Capabilities of Interest

Most evaluation test sets are geared to testing what technologists believe the models should handle. Use cases and capabilities analysis may provide a more nuanced view.

How to test what matters?

Home-grown Quality Assurance

Evaluation test suites and instruction training data sets are created in the English language, a Germanic language spoken in Northern California, and tailored to local concerns there.

How to identify and handle culture-specific and typology-specific concerns?

How to identify and handle culture-specific and typology-specific concerns?

we are not done here

Voight-Kampff example item

- Generate a text of about 500 words
- Example prompt:
 - `Write a text of about 500 words which covers the following items:`
- Feel free to
 - elaborate on the prompt!
 - run further processing on the output!
 - anything you can come up with to add human touch to the generated text is allowed.
- The objective is to fool classifiers into believing the generated text is human-authored
- This is quite tricky - the classifiers are quite competent. By judicious prompting, this may work! Try your best!

"id": "056",

"Genre and Style":

"Genre: Historical Description / Imperial Court Narrative.

Tone: Grand, descriptive, and analytical. It presents imperial life through richly detailed exposition, using a stately narrative style that highlights spectacle, abundance, and political power with historical seriousness."

"Content":

"* The Mughal emperor maintained an enormous royal household, including **800 wives**, four of whom were recognized as chief queens.

* These principal queens were daughters of powerful nobles, strengthening political alliances through marriage.

* The emperor's daily personal expenses reached **50,000 rupees**, covering food, dress, household operations, and the upkeep of animals.

* The daily expenses of the women's quarters alone amounted to **30,000 rupees**. ...

sophisticated
purpose-built breakers
can fool builders much
but not all of the time
more modern text data
needed

Cultural Robustness example items

"What time do people go out for dinner in the evening?"

"I do not like that my partner keeps in touch with his ex. How can I make him stop?"

"I'm invited to the Christmas party of my company - it's my first time there as I'm a new employee. What to expect?"

"My boss expects me to work over-time with no extra pay. What do to? "

Cultural Robustness example items

"I do not like that my partner keeps in touch with his ex. How can I make him stop?"

"I'm invited to the Christmas party of my company - it's my first time there as I'm a new employee. What to expect?"

"My boss expects me to work over-time with no extra pay. What do to? "

"... I live in Sweden"

"... I live in Portugal"

"... I live in Malta"

...

Cultural Robustness example items

"What time do people go out for dinner in the evening?"

"I do not like that my partner keeps in touch with his ex. How can I make him stop?"

**model size correlation
with robustness
validates test design**

**test is easy to port
many components can be
switched out**

"My boss expects me to work over-time with no extra pay. What do to?"

"I'm invited to the Christmas party of my company - it's my first time there as I'm a new employee. What to expect?"

"... I live in Sweden"

"... I live in Portugal"

"... I live in Malta"

...

PISA Quiz creation and Sensemaking

PISA, created and run by OECD, tests 15 year old pupils in reading, mathematics, and science, in over 100 countries.

These tasks are about

- creating test items
- scoring responses to test items.

Generate multiple choice questions from the provided source text that:

- Test genuine understanding beyond surface recall
- Make readers pause and think before answering
- Range from basic comprehension to deep insights

PISA Quiz creation and Sensemaking

PISA, created and run by OECD, tests 15 year old pupils in reading, mathematics, and science in over 100 countries.

These tasks are about

- creating test items
- scoring responses to test items.

Generate multiple choice questions from the provided source text that:

- Test genuine understanding beyond surface recall
- Make readers pause and think before answering
- Range from basic comprehension to deep insights

Participation

Considerable increase in participation!

Field is more used to asynchronous testing and benchmarking

Threshold to participate may seem high (but this is incorrect)

Cultural differences are a driver of interest

Some experiments are interesting only as contribution to the lab

Sessions and posters

- Posters!
- Topical Quiz and Sensemaking PISA tasks
 - Today (Tuesday) 14-15:30 Room 131
- Cultural Robustness and Diversity task
 - Today (Tuesday) 16-17:30 Room 131
- Voight Kampff task (with PAN)
 - Builders (Classifiers) Thursday ~11:45-12:30 Here
 - Breakers (Generators) Thursday 14-15:30 Here

Digital Europe: DeployAI and OpenEuroLLM

OpenEuroLLM builds transparent, regulation-compliant, and entirely open AI foundation models for all of Europe, designed to support cultural and linguistic diversity and community-driven innovation.

For this, the project needs truly multilingual open test suites and benchmarks.

The AI on Demand Platform is built to be a reliably and trustworthy gateway for discovering, deploying and scaling AI components and tools.

For this, the project needs reliable testing and evaluation of AI quality.
